CYBERS

Primend and CYBERS joint service to provide our customers with the best security monitoring solutions.

While consuming cloud services, it is vital that all security measures are in place. Otherwise, it poses serious threats to organizations, such as taking over an e-mail address, stealing personal data and trade secrets, or even taking control of the entire organization's infrastructure and business.

These objectives can be achieved through the following services:

M365 Security Monitoring

First we collect information and analyze cloud settings.

Short summary of current situation, giving an overview of:

- How vulnerable to attack is the organizations cloud environment
- Drawing attention to critical shortcomings
- Top 5 Security Score problem and their solutions
- For better configuration making changes that can be implemented in the current environment without additional costs

Strengthen Exchange Online

Exchange Online is a Microsoft Cloud version of the popular Microsoft Exchange Server that provides email, calendar, and contact management services to millions of business users in the public cloud.

We will check the following points:

- Exchange Online sign-in policies
- Access e-mail via internet browser
- Exchange defense policies
- Email spoofing, anti-phishing and reporting
- Mobile devices access to organizational data
- General security settings that affect Exchange Online security
